

Sasha's International, Inc: The best quality parts at the best available prices!

Battery Industry News

Exciting Industry Trends from the B.I.N.

MISSION STATEMENT

We at Sasha's International, Inc. are committed to bringing you the best prices, service and information. That is why we have created a monthly newsletter for our customers, letting them know some of the exciting new technologies and products that we are offering. As always, if you should need any specific part, information, or assistance with a product, please feel free to call, fax, or email us.

-Dimitri Andonov, General Manager

NEWS

Do you know that lead is in 2nd place on the U.S. government's hazardous substance list? That lead is the worst and most widespread pollutant? That lead accumulates in the body and its effects can be catastrophic? That lead gets into the body when dust or fumes are inhaled or when ingested from contaminated hands, food, water, cigarettes and clothing? Simply washing with plain soap and water will not significantly reduce the spread of contamination or the danger of ingestion. **Clean-All Heavy Metals® Hand & Body Soap** is an effective way to keep surfaces and laundry safe. Remove heavy metal residue and reduce the risk of contamination with **Clean-All Heavy Metals® Hand & Body Soap**.

NEW EQUIPMENT SPOTLIGHT

- Longer duration of the belt
- Higher abrasion resistance of the surface.
- Non - woven form

SEAMLESS PASTING BELT – The Seamless Pasting Belt has a high abrasion resistance, since it includes a special chemical, which provides a longer lifetime of the belt. To achieve higher abrasion resistance, the belt is made stiffer at the beginning, and should be wet before and during the application. This enables smaller consumption of the paste, which actually reduces the cost of production. These battery pasting belts normally withstand around 1,000,000 plates per belt without problems.

The correct length of the battery pasting belt is the inside circumference. To determine it, run a tape measure around the pulleys and add 1/4". The belt must fit tight without stretching it too hard. We are able to furnish any length needed.

NEW EQUIPMENT AVAILABLE

HIGH PERFORMANCE RECTIFIER – Innovative inverter technology with a constant current charge and discharge facility at a very high P.F., this High Performance Rectifier has a lower output ripple, and a very fast transient time response. Modular cabinet equipped with 1, 2, or 4 circuits each. Each circuit is able to provide a full battery formation cycle independent and insulated from the other circuits. Suitable for industrial battery formation.

LIFT TABLE – Lift tables contain over 400,000 combinations of load capacity, vertical travel, table size, power source, and other characteristics. The table lifts can also be supplied with a large assortment of optional accessories and modifications to suit the customer's needs. Some variations use an air motor to power the hydraulic pump. High Cycle units are designed for especially heavy use.

DIGITAL HYDROMETER / DENSITY METER – This portable specific gravity meter uses oscillating U-tube technology while measuring the density of your sample, supply results within seconds. It is able to communicate wirelessly with a printer or PC via the integrated IrDA interface. This is a great solution for battery system, general industrial and laboratory applications.
